EDUCATION

Towson University

Bachelor of Science in Computer Science

Towson, MD

Aug. 2022 – May 2026

- GPA: 3.5/4.0
- Software Engineering Track

EXPERIENCE

Research Assistant

Jan 2025 – Aug 2025

Towson University

Towson, MD

- Built a Flask dashboard to visualize Fitbit-derived health metrics in real time
- Integrated Fitbit API with OAuth 2.0 for secure login, token refresh, and session management
- Coauthored research on brain-tumor classification models (CNNs, ViTs) and assisted with code reviews
- Supported development of early-prediction machine-learning models for preterm birth detection

Food Expeditor

Apr 2025 – Present

Busboys and Poets

Columbia, MD

- Managed quality control and coordinated order workflow for dine-in and takeout service
- Achieved an average 20-minute ticket time during peak hours by improving coordination efficiency
- Maintained a 3.5 GPA while working 20 hours per week and taking six full-time courses

PROJECTS

AI Stock Analyzer | *TypeScript, Python, Next.js*

Nov 2025

- Collaborated with a team of 4 to build a stock-analysis tool for the 2-hour NVIDIA Agents for Impact Hackathon
- Integrated NVIDIA NIM APIs to run media-sentiment analysis and generate stock predictions
- Implemented a Scikit-learn regression model using 30-day trends and trading volume
- Retrieved and visualized market data using Yahoo Finance API and Recharts

AI Task Planner App | *React, JavaScript, TypeScript, Express, PostgreSQL(Supabase)*

Sept 2025

- Led a team of 3 to develop a task-scheduling app for the 24-hour hackUMBC 2025 hackathon
- Integrated Gemini 2.5 Pro API to convert high-level goals into structured subtasks
- Automated task scheduling by inferring time requirements, reducing manual planning time by 30%
- Normalized model-generated local timestamps to UTC for consistent database storage

Open-Source Contribution – FreeCol Game | *Java, Eclipse, JUnit 4, GitLab*

May 2025

- Collaborated with a team of 4 to refactor legacy modules using SonarQube static analysis
- Refactored highly complex methods, reducing cyclomatic complexity by 15% and improving readability
- Resolved 25+ code-quality issues, including God Classes and design pattern issues (e.g., Singleton)
- Added new gameplay features such as cheats mode and enhanced UI interactions

Parser Implementation | *F#*

May 2025

- Implemented a recursive-descent parser in F# for a custom language grammar
- Used pattern matching and higher-order functions to construct and validate Abstract Syntax Trees
- Added support for nested loops, conditionals, and function definitions

Custom Keyboard Shortcut Driver | *C, Linux*

Dec 2024

- Built Linux kernel module to intercept keycodes and detect multi-key sequences using keyboard notifier API
- Implemented character device driver with IOCTL interface for kernel-to-user-space communication

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, C++, SQL, HTML, CSS

Frameworks: React.js, Express, Next.js

Databases: PostgreSQL

Libraries: FastAPI, Flask, Scikit-learn, Pandas, NumPy

Tools: Git, Node.js, Apache Ant, Wireshark, Postman, JUnit 4, VirtualBox

Operating Systems: Windows, Linux
