TS/SCI Security Clearance | 443-454-6921 | Baltimore, MD

EDUCATION

Towson University - GPA: 3.5

Bachelor of Science in Computer Science, Software Engineering Track

Towson, MD

Aug 2022 – May 2026

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, TypeScript, C, C++, HTML, CSS

Frameworks/Libraries: FastAPI, React.js, Flask, Express.js, Next.js, Requests, Scikit-learn, Pytorch, Tensorflow, Pandas, NumPy, PyQt5

Other: PostgreSQL (Supabase), MongoDB, Git, Docker, REST APIs, Linux, TCP/IP, Postman, GitLab, JUnit 4, Agile

EXPERIENCE

Software Engineering Research Intern

Jan 2025 – Aug 2025

Towson University

Towson, MD

- Coauthored research on brain-tumor classification models with CNNs and ViTs; reviewed code and papers
- Analyzed papers and datasets to support development of preterm birth prediction models
- Delivered detailed research presentations to PhD collaborators in weekly meetings
- Built a Flask replacement for Fitbit's deprecated dashboard for user health metric analysis

PROJECTS

Restaurant Finder (Sit-Down) | *React.js, Vite, Express.js, Node.js, Supabase, Gemini API*

Dec 2025

- Built a Tinder-like restaurant finder with an Agile team of 5, allowing swipe-based AI-curated recommendations
- Designed site layout and developed landing page and authentication (signup/login) pages
- Integrated Gemini AI preference filtering and Google Places API for nearby restaurant search

Retrieval Augmented Generation (RAG) Course Chatbot | *React.js, Node.js, Supabase, Ollama*

Dec 2025

- Built a RAG assistant with a team of 5 to guide student tutoring, reducing material-related questions by 20%.
- Built a pipeline to chunk docs and generate embeddings to store vectors in **pgvector** for prompt-relevant output

Open-Source Contribution – FreeCol Game | *Java, Eclipse, Gitlab, JUnit 4, Apache Ant*

May 2025

- Refactored legacy Java codebase (200k+ lines) with a team of 4 using Spotbugs, SonarQube, JUnit 4, and CI/CD pipeline with Apache Ant and Gitlab
- Fixed 25+ issues including improper design patterns and long methods, reducing cyclomatic complexity by 15%
- Added gameplay features including cheats mode and enhanced UI interactions

Linux Kernel Shortcut Driver | *C, Linux, IOCTL, VirtualBox, Python, PyQt5*

Dec 2024

- Developed a C LKM using **notifier_block** to intercept keyboard interrupts and detect multi-key sequences
- Implemented a Character Device Driver with IOCTL for low-latency kernel-to-user communication; used **jiffies** for kernel-level timing and built automated build system via Makefile

LEADERSHIP AND ACTIVITIES

Hoya Hacks: Waste Detector (Greensight) | *FastAPI, Python, Docker, Supabase, YOLOv8*

Jan 2026

- Trained a YOLOv8n model on 10,000 images to categorize waste materials to be recycled, composted, or disposed
- Containerized the FastAPI backend using Docker to ensure consistent environment execution and seamless dependency management for YOLOv8 across various platforms

NVIDIA Hackathon: AI Stock Analyzer | *Next.js, Python, Scikit-learn*

Oct 2025

- Led development of a stock-analysis tool with a team of 3 during the 2-hour NVIDIA Agents for Impact Hackathon
- Integrated nemotron-nano-9b model for sentiment analysis and Scikit-learn model for price predictions
- Fetched and visualized real-time market data using Yahoo Finance API and Recharts

HackUMBC: AI Planner (TaskoAI) | *React.js, Vite, TypeScript, Express, Supabase, Gemini API*

Sept 2025

- Led an Agile team of 3 to build an AI-powered planner during the 24-hour HackUMBC 2025 hackathon
- Transformed high-level goals into structured subtasks using Gemini API, increasing planning efficiency
- Automatically schedule tasks onto calendar, reducing manual planning time by 30%
- Handled backend development and AI integration, Supabase configuration, and fullstack debugging
