443-454-6921 | [tomthen4@gmail.com](mailto:tomthen4@gmail.com) | [linkedin.com/in/tom-then-404a8626b/](https://www.linkedin.com/in/tom-then-404a8626b/) | [github.com/simulati0n](https://github.com/simulati0n)

## EDUCATION

---

### Towson University

*Bachelor of Science in Computer Science*

Towson, MD

*Aug. 2022 – May 2026*

- GPA: 3.5/4.0
- Software Engineering Track

## EXPERIENCE

---

### Expeditor

*Busboys and Poets*

Apr 2025 – Present

*Columbia, MD*

- Communicate with staff to maintain food quality and delegate food running tasks
- Balance 20 hours weekly with full-time course load of 6 classes

### Undergraduate Research Assistant

*Towson University*

Jan 2025 – Aug 2025

*Towson, MD*

- Developed a Flask web app to visualize real-time health metrics in an interactive dashboard
- Integrated Fitbit API with OAuth 2.0 for secure authentication, token refresh, and session management
- Coauthored research paper and review code on brain tumor classification using neural networks

## PROJECTS

---

### Stock Market Watcher App | *Python, JavaScript, FastAPI, React, Scikit-learn*

Aug 2025 – Present

- Building full-stack app to retrieve and visualize stock data using Yahoo Finance API and Recharts graphs
- Implemented Scikit-learn linear regression model to forecast prices from 30-day trends and volume
- Designed RESTful API with FastAPI to serve stock predictions and handle concurrent user requests

### AI Task Planner App | *React, JavaScript, Express, PostgreSQL, Gemini API*

Sept 2025

- Led team of 3 to develop task scheduling application in 24 hours for hackUMBC 2025 hackathon
- Integrated Gemini API to decompose high-level goals into subtasks with automated multi-timeframe scheduling
- Built full-stack app with React, Express REST API, and PostgreSQL database deployed on Cloudflare and Render

### Open-Source Contribution – FreeCol Game | *Java, Eclipse, JUnit 4, GitLab*

May 2025

- Led team of 4 in refactoring codebase using Apache Ant-based CI/CD pipeline
- Resolved 25 high-priority code quality issues identified through SonarQube static analysis
- Implemented game features including cheats mode and enhanced UI controls

### Parser Implementation | *Java, F#*

May 2025

- Implemented a recursive descent parser using both Java and F# based on grammar specifications
- Leveraged pattern matching, higher-order functions, and discriminated unions in F#

### Custom Keyboard Shortcut Driver | *C, Linux*

Dec 2024

- Built Linux kernel module to intercept keycodes and detect multi-key sequences using keyboard notifier API
- Implemented character device driver with IOCTL interface for kernel-to-user-space communication

### Snake Game | *Python, Pygbag*

Dec 2024

- Led a team of 4 using Agile methodology to develop and document the project
- Added features such as trivia questions, lives system, score tracking, levels, and custom sprites/sounds
- Implemented local score tracking using SQLite, allowing persistent high scores across sessions
- Created documentation including SRS, Master Scope Doc, and Work Breakdown Structure

## TECHNICAL SKILLS

---

**Languages:** Python, Java, JavaScript, C, C++, SQL, HTML, CSS

**Libraries:** React, FastAPI, Flask, Scikit-learn, Pandas, NumPy

**Tools:** Git, Node.js, Apache Ant, JUnit 4, VirtualBox, MySQL Workbench

**Operating Systems:** Windows, Linux
